Summary

Software Engineer with 3 years in Java backend development, Spring Boot microservices, REST APIs, and SQL performance tuning. Experienced in telecom/BSS delivery, third-party integrations, CI/CD (Jenkins), and building internal automation tools for logs, deployments, and API debugging.

Experience

AMDOCS DEVELOPMENT CENTER – Software Engineer

07/2023 – Present

XL Axiata - Java developer

Pune, Maharashtra

- Implemented third-party service integrations and improving internal-external system communication.
- Designed and optimized Camunda workflows, automated testing frameworks, improve performance test execution speed by 5%, workflow reliability, automation efficiency, scalability, and monitoring systems.
- Collaborated on database optimization, reducing query response time by 10% and reducing fallouts.

VODAFONE Germany – Software developer

- Developed applications using Java, Spring Boot, and REST APIs, resulting in 5% faster project delivery.
- Optimized complex SQL queries with indexing and query-tuning on reporting paths, cutting report generation time by >10%. Improved backend efficiency and resource utilization for high-load windows.
- Automated testing using TestNG, raising coverage from 60% to 90% ensuring robust test coverage fully.

OPTIMA Philippines – Backend developer

- Developed and maintained Apache Camel microservices handling 1M+ daily transactions with reliable system integrations, monitoring, logging, scalability, optimization and production-grade stability.
- Built and maintained Jenkins CI/CD pipelines for automated build and deployment workflows, reducing manual deployment effort by 60% and improve release consistency, monitoring, automation, reliability.
- **Internal automation tools:** Fuse Logger (multi-env log search), Subscriber Tool (DB lookup by MIN/accountId), SM Tool (deployment automation), API Visualizer (end-to-end API flow mapping).

Projects

NIT WARANGAL Summer School Project

01/2023 – 06/2023

- Implemented a STR-DFT based algorithm using Python, NumPy, and pandas for advanced signal processing and data analysis, improving computational accuracy, scalability, and performance reliability.
- Developed mathematical and predictive model using advanced algorithms, Python-based analytical tool, and data processing techniques, achieving accuracy rates exceeding 95% across projects consistently.

SKILLS

Languages: Java, Python, C++, C | **Testing:** JUnit, Mockito, TestNG | **Data:** MySQL, Couchbase, Kafka

Backend: Spring Boot, Apache Camel, REST APIs, Microservices | **Tools:** Git, Maven, Bitbucket

Frontend: React, Angular, HTML, CSS | **DevOps & Cloud:** AWS, Docker, Kubernetes, Jenkins

CERTIFICATES / ACHIEVEMENTS

- Certified in AWS Cloud Practitioner, Kubernetes for Beginners, and YAML: Zero to Master.
- Achieved AIR-177 in NIMCET, 4th place in NITW Hackathon, and Amdocs India Coding Champion.

EDUCATION

Master of Computer Applications

Warangal, India

National Institute of Technology, Warangal

10/2020 – 07/2023
